The Russian regime and LGBT people have both tried to redefine the Human rights and the Russian traditional values in order to make them comply with their own interest. First, Russia has worked within the UNHRC to change the meaning of Human Rights in a way which recognizes and protects traditional values. In The Situation Of Lesbian, Gay, Bisexual And Transgender People In The Russian Federation (Last Three Months 2011 — First Half 2012) (Moscow, Russian Federation: Moscow Helsinki Group). [Online]. Available: http://www.mhg.ru/publications/EA10000 [6 December 2013]. A directory of LGBT libraries and archives throughout the U.S and Canada, a directory of contributors with their primary institutional affiliations and the entries they prepared, and a comprehensive index conclude the set. Arab Americans, Class and class oppression, Gentrification, Native Americans, Republican Party, Sexual revolutions, and Visual art are some of the subjects covered. Libraries that own the Garland set will want, therefore, to make room for Encyclopedia of Lesbian, Gay, Bisexual, and Transgender History in America in their reference collections. It an exceptional work that should be useful for academic and public libraries. General readers, students, researchers, and members of the LGBT communities alike will find this to be a most welcome resource.
